Runway Broom Specifications

- Bristle Wire:** Min. 0.018" diameter hard drawn high carbon spring steel
3.5 crimps per inch
0.125" crimp depth
Carbon content 0.65% to 0.75%
Manganese content 0.45% to 0.65%
AISI designation 1069
Crimped on multiple planes
Tensile strength 315 000 to 375 000 PSI
Zinc coated: Min. 15 ounces per square foot (galvanized)
- Pin:** 0.25" X 0.5"
Head size of pin 0.375" X 0.625" oval
Protrude trough the ring 0.375" to 0.5"
- Friction Liner:** Neoprene liner:
Prevents bristle friction against the steel ring
Reduces vibration
Disperses heat
Liner grips the bristle preventing movement in the ring
- Ring:** 0.037" X 0.041" X 2.5" 20 gauge
Spot welded together to form continuous ring
Ring crimped every 1" +/- 0.125"
3 Welds to hold the ring together
Overlap 2" to 2.5"
Height of ring 1"
Width of section 0.625"
- Holding Wire:** Minimum 6 raps of hard drawn bright steel
Tensile strength 130 000 to 160 000 PSI
- Size:** 10 3/4" ID X 36" OD
- Balancing:** Heavy point is marked with permanent paint spot on hub ring
The maximum imbalance is 24 ounces-inches
- Weight:** Minimum 8.5 lbs (+/- 5%)
